TATENDA MANYEPA

TECHNICAL ENGINEER | AUTOMATION & CONNECTED SYSTEMS | SMART BUILDINGS

Derby, UK • +44 7932 793775 • tatenda.manyepa.sa@outlook.com • linkedin.com/in/tatenda-manyepa

PROFESSIONAL PROFILE

Customer-facing Technical Engineer with 3.5+ years of experience across enterprise IT, technical consulting and business-critical automated operational environments. Currently supports warehouse and logistics systems, investigating faults across WCS/WMS applications, databases, integrations, messaging, automation equipment and operational workflows. Experienced in structured troubleshooting using SQL, application and service logs, system events and monitoring tools, while working directly with customers and specialist engineering teams to restore reliable operation.

Offers a strong transferable foundation for smart buildings and Building Management Systems through connected operational technology, automation and controls exposure, system integration, monitoring, incident diagnosis and high-availability operations. MSc qualified in Information and Communication Technology, with additional AWS cloud and solution architecture development. Seeking to build deeper capability in BMS, connected buildings and intelligent building operations through structured product and controls training.

CORE TRANSFERABLE SKILLS

Automation & connected systems: business-critical warehouse automation, WCS/WMS, PLC-connected operational environments and automated material movement.

Monitoring & troubleshooting: root cause analysis, application and service logs, system events, observability, incident management and operational validation.

Integration & data: SQL, SQL Server, APIs/interfaces, messaging, database analysis, system integrations and workflow tracing.

Customer-facing engineering: technical investigation, customer bridge calls, stakeholder communication, technical-to-business translation and documentation.

Cloud & architecture: AWS fundamentals, high availability, monitoring, security and solution architecture.

Development focus: smart buildings, BMS, connected systems, intelligent automation and operational optimisation.

PROFESSIONAL EXPERIENCE

Technical Engineer — Inteq
January 2024 – Present

Supporting business-critical automated warehouse and logistics environments integrating enterprise applications, databases, robotic systems, conveyors, control systems and physical automation.

- Support integrated warehouse automation and logistics systems, investigating faults across WCS/WMS applications, databases, system integrations, robotic systems, conveyors and automated material-handling equipment.
- Investigate complex incidents using SQL, application and service logs, Windows events, monitoring tools, message flows and database records, tracing problems across interconnected systems to identify failure points and operational impact.
- Analyse end-to-end system behaviour across enterprise applications, APIs/interfaces, messaging services, databases and automation/control layers, building a strong understanding of how software, data, networks and physical equipment interact.
- Troubleshoot communication and connectivity issues between applications, servers, integrations and PLC-connected automation equipment, using technical evidence to isolate problems and coordinate further controls or engineering investigation.
- Support environments incorporating robotic fulfilment systems and automated material movement, investigating how application, task, inventory, integration and communication behaviour affects physical automation.
- Work directly with customers, application specialists, controls engineers and other technical teams to diagnose operational problems, determine appropriate actions and communicate technical findings clearly.
- Develop and prototype AI-assisted operational support solutions using prompt engineering, Retrieval-Augmented Generation (RAG) and Model Context Protocol (MCP), connecting AI with tools and workflows to automate elements of knowledge retrieval, incident investigation, log analysis and engineering support processes.
- Participate in high-priority incident bridge calls for business-critical systems, communicating technical findings, operational impact, investigation progress and recovery actions to technical and non-technical stakeholders.
- Support system restoration, service recovery and post-change validation, confirming that integrated systems and operational workflows are functioning correctly following intervention.

Associate Technical Consultant — Synamedia
September 2022 – November 2023

Customer-facing technical consulting supporting broadcast and video delivery platforms, system integration, cloud infrastructure and engineering automation.

- Worked with customers and multidisciplinary technical teams to understand requirements, investigate technical challenges and support the design, configuration and delivery of appropriate technology solutions.
- Built, configured and tested broadcast headend systems supporting Sky television services, integrating hardware, software and network components used in the processing and delivery of live TV and Video on Demand (VoD) content to consumers.
- Supported system integration and technical implementation activities across customer environments, working with applications, Linux-based systems, networking and supporting infrastructure to validate end-to-end solution behaviour.
- Developed Python scripts to automate engineering and operational activities, reducing repetitive manual tasks and improving the efficiency and consistency of system configuration, testing and technical workflows.
- Supported the migration of a customer platform to AWS cloud infrastructure, contributing to implementation and validation activities associated with improving platform scalability, security and operational efficiency.
- Delivered 10+ customer-facing technical presentations, translating complex systems, architectures and technologies into clear explanations for technical and business stakeholders.
- Produced technical documentation and training materials covering Linux, SQL and enterprise technologies, supporting knowledge transfer, technical enablement and customer/team onboarding.
- Implemented a password-rotation solution supporting 50+ users, improving security, credential management and operational reliability.

IT Helpdesk Analyst — Close Brothers **May 2021 – July 2022**

Enterprise IT support within a regulated financial-services environment.

- Provided enterprise IT support, managing approximately 40–50 technical requests per day from initial investigation through resolution.
- Diagnosed software, access, connectivity and infrastructure-related issues, applying structured troubleshooting and escalating complex incidents with appropriate technical evidence.
- Supported software deployments and infrastructure changes, maintaining clear communication with users throughout incidents and service requests.
- Created and maintained technical documentation for recurring issues, improving knowledge sharing and support efficiency.

SELECTED SOLUTION & ARCHITECTURE EXPERIENCE

Enterprise Operational Systems Modernisation — Independent Architecture Case Study

tatenda-manyepa.github.io

- Assessed operational pain points, system constraints, risks and desired outcomes within a business-critical automated environment.
- Designed target-state improvements spanning cloud architecture, integration, resilience, observability, security and AI-assisted operations.
- Documented architecture decisions and technology trade-offs, demonstrating a structured approach to improving reliability and operational visibility across connected systems.

TECHNICAL SKILLS

Automation & Connected Systems: Enterprise automation, WCS/WMS, PLC-connected systems, operational technology concepts, system integrations, messaging, monitoring and high-availability operational environments.

Data & Troubleshooting: SQL, SQL Server, log and event analysis, root-cause investigation, system monitoring, operational data analysis and technical incident management.

Programming & Integration: Python scripting, REST APIs, JSON, Git, GitHub, Docker and workflow automation.

Networking & Infrastructure: TCP/IP, DNS, DHCP, ports and protocols, firewalls, client-server architecture and network troubleshooting fundamentals.

Cloud & Solution Architecture: AWS, IAM, EC2, VPC, RDS, S3, CloudWatch, CloudTrail, high availability, resilience, disaster recovery and solution architecture.

AI & Intelligent Automation: Generative AI, LLM applications, RAG, prompt engineering, AI-assisted incident investigation, knowledge retrieval, log intelligence and human-in-the-loop AI.

Smart Buildings – Developing Knowledge: Building Management Systems (BMS) fundamentals and IoT concepts.

EDUCATION & PROFESSIONAL DEVELOPMENT

MSc, Information and Communication Technology — Anglia Ruskin University, Cambridge **2019 – 2021**

BSc, Biomedical Science — University of Hertfordshire, Hatfield **2015 – 2019**

AWS Cloud Solutions Architect Professional Certificate **Completed**

AWS Generative AI Applications Professional Certificate **In Progress**
